## Errata

### Harman AN, Lai J, Turville S, et al. HIV infection of dendritic cells subverts the IFN induction pathway via IRF-1 and inhibits type 1 IFN production. *Blood*. 2011;118(2):298-308.

On pages 298 and 307 in the 14 July 2011 issue, the seventh author's name (Sarah Mercier) is incorrectly listed without the middle initial. The correct name is Sarah K. Mercier. In the "Authorship," the initials "S.M." should have been listed as "S.K.M." The errors were corrected in the online version, which now differs from the print version.

### Arora M, Klein JP, Weisdorf DJ, et al. Chronic GVHD risk score: a Center for International Blood and Marrow Transplant Research analysis. *Blood*. 2011;117(24):6714-6720.

On page 6718 of the 16 June 2011 issue, there are errors in Table 3; 2 categories of risk scores are reversed. In the "Platelet count at cGVHD onset" row in the "Risk score" column, platelet count " $\geq 100 \times 10^9/L$ " should correspond to a score of "0" and platelet count " $< 100 \times 10^9/L$ " should correspond to a score of "1." Also, in the "Time from transplantation to cGVHD" row in the "Variable" column, " $> 5$  mo" should be " $\geq 5$  mo." In the "Serum bilirubin at cGVHD onset" row in the "Variable" column, " $< 2$  mg/dL" should be " $\leq 2$  mg/dL." In the "KPS at cGVHD onset" row in the "Variable" column, " $> 80$ " should be " $\geq 80$ ." In the "Platelet count at cGVHD onset" in the "Variable" column, " $> 100 \times 10^9/L$ " should be " $\geq 100 \times 10^9/L$ ." The correct table is shown.

**Table 3. Assigned variable-specific risk scores for each category of the variables selected based on relative risk**

Variable	Risk score
<b>Recipient age at transplantation</b>	
< 29 y	0
30-59 y	1
> 60 y	2
<b>Prior acute GVHD</b>	
None	0
Present	1
<b>Time from transplantation to cGVHD</b>	
$\geq 5$ mo	0
< 5 mo	1
<b>Serum bilirubin at cGVHD onset</b>	
$\leq 2$ mg/dL	0
> 2 mg/dL	2
<b>KPS at cGVHD onset</b>	
$\geq 80$	0
< 80	1
<b>Platelet count at cGVHD onset</b>	
$< 100 \times 10^9/L$	1
$\geq 100 \times 10^9/L$	0
<b>Type of donor</b>	
HLA-identical sibling/well-matched or partially matched URD	0
Other related/mismatched URD	1
<b>Disease status at transplantation</b>	
Early	0
Intermediate	1
Advanced	2
<b>Sex mismatch (donor/recipient)</b>	
Male/ male, male/female, female/female	0
Female/male	1
<b>GVHD prophylaxis</b>	
CSA + MTX + other	0
Tacrolimus + MTX + other or T-cell depletion	1

CSA indicates cyclosporine; and MTX, methotrexate.
